Apex Systems — Supplier Proposal

Enterprise Data Platform Modernization | Synthetic Bid Submission

Supplier: Apex Systems
Submission date: 2026-10-20
Historical experience rating (test input): 4.2/5
Profile: Strong technical capability and security; higher price; moderate schedule confidence.

1. Executive summary

Apex proposes a technically robust modernization using phased migration, automated validation and a security-first operating model. Architecture and controls are detailed, but price is above other bids and schedule contingency is limited.

2. Technical solution and approach

Landing-zone separation for ingestion, transformation, analytics and serving; workload inventory; dependency mapping; parallel migration waves; automated reconciliation; performance baselining; rollback rehearsals. A complete sample runbook is not included.

3. Delivery plan, timeline and team

Discovery 4 weeks; architecture 5; pilot 4; migration waves 12; stabilization 3. Total 28 weeks. Roles include program manager, data architect, security lead, two migration engineers, QA lead and part-time change manager. Customer data-owner availability is assumed.

Apex Systems — Commercial, Security and Risk Detail

4. Commercial proposal and assumptions

INR 1.42 crore implementation; optional 12-month support INR 18 lakh. Includes migration tooling and two workshops. Excludes cloud consumption, third-party licenses, out-of-region travel and major source remediation. Payment: 20/30/30/20% at milestones.

5. Security, compliance and data protection

RBAC, least privilege, encryption in transit and at rest, audit logging, secrets management, quarterly access reviews, vulnerability scans and incident exercises. Claims ISO 27001-aligned practices but attaches no current certificate. Residency and retention need confirmation.

6. Risks and dependencies

Higher price; limited schedule buffer; certification claim lacks attached evidence; customer dependencies may delay migration.

The supplier proposes a joint risk register reviewed weekly during delivery. The gaps stated above should be validated during due diligence.

Apex Systems — Support and Acceptance

7. Support and operational handover

8x5 support plus 24x7 P1 response; 30-minute P1 acknowledgement; monthly reviews; 90-day stabilization. Two comparable migrations are mentioned; contacts only after shortlisting.

8. Acceptance approach

Acceptance should follow agreed functional, reconciliation, performance, security and operational-readiness checks. Detailed thresholds and service levels must be finalized in contract documents.

9. Synthetic-data declaration

This proposal is fictional and exists only to test the software workflow. It is not a real offer and must not be used for procurement.

10. Reviewer note

Score only the evidence provided. Do not infer certifications, guarantees or capabilities when supporting evidence is absent. Record missing information as a gap.
